Summary

DevOps Engineer with 4 years on the DevOps team at Sonic Healthcare, where product teams across a regulated healthcare enterprise ship through the CI/CD framework I help build and run. I work at the seam between platform and product: onboarding teams, extending shared tooling in Go and Python, and making security scanning and secrets management the default. Four years running on-prem Kubernetes (CKA); expanding into AWS (Solutions Architect – Associate, Nov 2026).

Skills

Platforms: Kubernetes (CKA; on-prem VMware Tanzu, VKS), Docker, Helm, ArgoCD/GitOps, Harbor, AWS, Azure, Linux, Nginx, IIS

CI/CD and Infrastructure as Code (IaC): Azure DevOps/TFS, Octopus Deploy, Ansible, Terraform

Testing: Bruno (API), Playwright (end-to-end)

Security and quality: SonarQube, Snyk, HashiCorp Vault, ISO 27001 / NIST-aligned controls

Observability and ops: Grafana, Langfuse, ServiceNow (ITIL v5), Kong API Gateway, Jira, Confluence

Languages: Go, Python, Bash, PowerShell, SQL, YAML, JavaScript/TypeScript

Certifications

Certified Kubernetes Administrator (CKA), CNCF Jun 2026

ITIL Foundation (v5), PeopleCert Jun 2026

AWS Certified Solutions Architect – Associate, Amazon Web Services Scheduled Nov 2026

Work Experience

DevOps Engineer, Sonic Healthcare

Aug 2022 – Present

Sydney · Full-time

- Migrated **all 35 products** from VMware Tanzu to vSphere Kubernetes Service (VKS) across **five environments and two sites**: re-targeted each product's Ansible, Helm and ArgoCD configuration, redeployed through the shared framework, and ran cut-overs with owning teams.
- Co-maintain and extend the team's Go CLI that renders Ansible, Azure DevOps and Kubernetes configuration from versioned templates (**cuts pipeline setup time ~70%**); added StatefulSet deployment support and dynamic Node image selection by Angular version.
- Cut the support **SLA breach rate from 38% to 4%** by building a knowledge base and Grafana dashboards for SLA compliance and backlog prediction; provide L2 incident response in ServiceNow (ITIL v5).
- Integrated SonarQube and Snyk as standard pipeline stages across the microservices estate; own SonarQube project configuration; moved pipeline secrets into HashiCorp Vault.
- Stood up a dedicated build VM with the full legacy .NET toolchain, bringing older .NET projects under SonarQube code-quality and security scanning for the first time.

Work Experience (continued)

- Migrated legacy Angular/IIS and .NET applications into the framework via Docker-based artefact extraction, enabling automated Octopus deployments without platform rewrites.
- Deployed Langfuse on Kubernetes (PostgreSQL, Valkey, ClickHouse), templating Helm values for automated rollout through Ansible.
- Built shared API and end-to-end test infrastructure with Bruno and Playwright.

Educational Manager, STEMLOOK

Feb 2022 – Present

Sydney · Casual

- Built an Airtable-based automation system for enrolments, class scheduling and parent communications across **three centres**, replacing manual workflows.
- Design and deliver K–Year 10 coding, robotics and AI curriculum; coordinate educators across three locations.

Education

Bachelor of Advanced Computing (Honours, First Class)

2024

University of Sydney

Major: Computational Data Science. Minor: Cognitive Psychology.

Thesis: multi-aspect sentiment analysis with BERT and contrastive learning (87% accuracy).

IB Diploma

2020

Neerja Modi School · 41/45
